

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A cleaning cart comprising:
 - a base;
 - at least three wheels mounted to the base;
 - a structure, arranged over the base, for receiving cleaning utensils;
 - a handle;
 - at least one electric motor functionally linked to a transmission and acting upon at least one of the wheels, the motor being arranged on the underside of the base; and
 - an accumulator arrangement mounted on the underside of the base, wherein the accumulator and the wheels are directly mounted to the same surface of the base, wherein the accumulator is equipped with a docking rail arranged in the marginal region of the base, the docking rail being constructed and arranged to be connectable to a charging rail for charging the accumulator.
2. (Canceled)
3. (Previously presented) The cleaning cart according to claim 1, further comprising a control arrangement connected to the at least one electric motor and the accumulator arrangement is provided therein, which comprises an operating device proximate to the handle.
4. (Previously Presented) The cleaning cart according to claim 1, wherein the at least three wheels comprises four wheels-arranged under the base, with two wheels being fixed and two wheels being steerable.
5. (Previously Presented) The cleaning cart according to claim 4, wherein, when seen in the driving direction, the fixed wheels are arranged approximately at a center of the cart in the

region of side edges of the base and one movable wheel is arranged centrally in each of a front edge region and a rear edge region of the base.

6. (Previously Presented) The cleaning cart according to claim 5, wherein the at least one electric motor comprises two electric motors, each functionally linked with a fixed wheel via a transmission and each arranged approximately at the center of the base.

7. (Previously presented) The cleaning cart according to claim 5, wherein the at least one electric motor, is arranged approximately at a center of the base, and wherein the at least one motor is functionally linked to a corresponding fixed wheel via a transmission having a differential.

8. (Previously Presented) The cleaning cart according to claim 3, wherein the handle comprises a hand grip and the operating device comprises a joystick arranged proximate the hand grip.

9. (Canceled)

10. (Previously Presented) The cleaning cart according to claim 3, wherein the base comprises a stand for an operator.

11. (Previously Presented) The cleaning cart according to claim 10, wherein the stand is integrated in the base.

12. (Previously Presented) The cleaning cart according to claim 10, wherein the stand comprises a standing platform having wheels, the standing platform being attachable to the base.
